

SOFT LURES LUCKY JOHN PRO SERIES

All Lucky John lures have stable flavour and smell (cancer, shrimp or mackarel). The flavouring and aromatic substances are not only applied to the lures surfaces, but also are the part of lures material. Scent&Taste Inside Formula guarantees that 65% of attractant is placed inside lure material, other 35% composes special substance used for lures treating before packaging. The attractant composition is a secret of Lucky John Company. This way in these lures made of the „eatable rubber“ an attractant is maximally kept for the long time. The colour-grade is also well matched, the range of lures includes all colours, popular among anglers, therefore, it is easy to choose the required one. For example, the popular among perch-anglers green-brown colour-grade is presented by few colours variants. Among them are Cola – well-known „engine oil“ and close to this colour Nagoya Shrimp „american“, Green Pumpkin, Dark Green and Kiwi Seed. There are many other variants of colourations, so Lucky John has its solution for all kinds of predator's mood.

PACKAGE OF UNAGI SLUG 2,5"/3,0"/3,5"

The secret of the efficiency of UNAGI SLUG lies in the lure's design. The Slug is divided by thin partitions into several sections. Even if jerks are very careful, the tail starts moving actively and attracts even the most passive fish. In the production of the silicone for UNAGI SLUG, attractant of shrimp is used – this guarantees results in any conditions of predatory fish angling. It is supplied in three sizes: 6.35; 7.62 and 8.89, which allow to find lure for angling various predators. Installation options can be different: "Carolina", "Texas", joint, dead-end installation, "Wacky" and lots of other interpretations. The main thing is the presence of a hook to allow using the constructive abilities of the UNAGI SLUG.

PACKAGE OF JOCO SHAKER SUPER FLOATING 2,5"/3,5"/4,5"

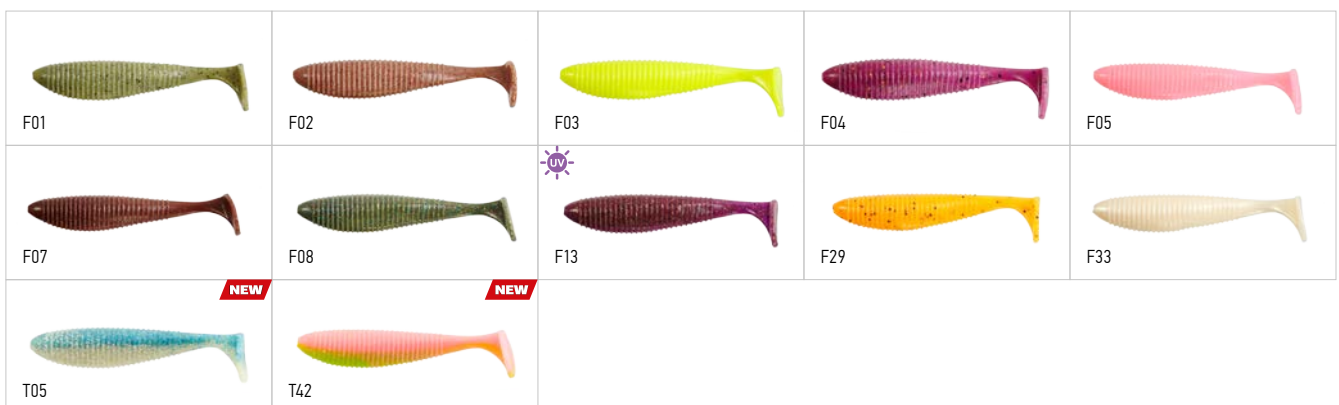

Joco Shaker Super Floating is a lure with a classic shape of a shad and ribbed surface of the body. This is the first lure from the Lucky John series of **Floating Soft Plastic System** material. The material of the lure has extremely low density and, therefore, it is lighter than water. The lure will retain its floating properties even after its use on different tackle and after pike's "bites". The body of the lure contains an attractant with mackerel flavour, which is also applied to its surface in liquid form.

1. The lure works perfectly the entire time it stays in the water. Once the butter-fly-type weight reaches the bottom, the lure floats instantly and turns its tail up. Any movements of water or minor movements of the lure make it move. Thus, **Joco Shaker Super Floating** lure can be animated for a long time practically in a single spot. In cold water, when predatory fish are passive, it is the only way of provoking the fish to attack.
2. The number of missed strikes decreases significantly. The floating lure always stays in a vertical position in water – it is an optimal position for a successful strike of biting predatory fish.
3. In muddy water, it is more difficult for predatory fish to notice your lure at a great distance. And if it lies on the bottom, noticing it is practically impossible. The floating lure is always clearly visible and attractive even at a great distance.

Joco Shaker Super Floating lure is supplied in the following sizes: 2.5 inches – for angling perch; 3.5 inches – for angling perch and pike-perch, and 4.5 inches – for angling pike. The lure has a special "pocket" for off-set hooks. It has to be installed on a swivel system with a single or double hook. The palette of 10 colours has been specifically selected.

PACKAGE OF SHADS **NEW** 3D BASARA SOFT SWIM

"New to the Lucky John lineup this year is the new generation of realistic baitfish plastics that sets the new standard in soft baits – the Basara 3D Soft Swim. This revolutionary plastic combines the most realistic of appearances, a specially designed 3D/holographic imaging that projects out to distance to attract gamefish, with lifelike shad tail action and the patented Lucky John scent retention and dispersal system. Available in 4 attention getting color schemes and 4 different sizes, the Basara 3D Soft Swim is as versatile as it is lethal to jumbo perch, slab crappies, aggressive bass, and trophy walleyed pike. The Basara 3D is the product of the finest Japanese production technology, made of high quality PVC soft plastic material with an unbelievably lifelike finish more often seen on high end hardbaits. The most effective plastic available in swimbait and jugging presentations, the Basara 3D Live plastic series is the obvious choice for today's serious angler.

PACKAGE OF SHADS **NEW** 3D MAKORA SHAD TAIL

The Makora 3D Live line of soft plastics offer the serious predator angler the very best in appearance, action, and versatility. The Makora 3D design projects an attention getting and lifelike appearance that eager predators will be attracted to from afar. Like all Lucky John plastics, the Makora 3D is also enhanced by the proprietary Lucky John scent retention and dispersal system, adding a natural scent that brings predator fish in and keeps them on the hook. Offered in both a shad tail configuration for realistic swimbait presentations, as well as a split tail configuration to resemble a wounded baitfish in situations that call for a jerk-bait style presentation, the Makora 3D comes in 7 lifelike color schemes and 4 different sizes that allow the angler to exactly tailor the baitfish presentation needed to reel in predators, such as black bass, walleyed pike, lake trout, and northern pike. The Makora 3D is the product of the finest Japanese production technology, made of high quality PVC soft plastic material with an unbelievably lifelike finish more often seen on high end hardbaits.

PACKAGE OF SHADS TIOGA FAT 3,9"/4,5"/5,8"

Tioga FAT – a lure designed for angling trophy predators. Due to the original form of its body, this lure, while moving in the water, generates swings, which attract predators. Its side ribs serve to enhance the lure's play, making its movements more real. This hybrid lure has a worm-like body with typical thickening in the front part and small hoof-tail from shad. It is equipped with a special pocket for off-set hook installation. Thanks to its "fleshy" body, this lure can be used without front split shots in plant-filled water bodies. The lure has an attractive mackerel scent. The Scent&Taste Inside Formula guarantees that, after the bite, fish would hold the lure in its mouth for the maximum period of time, allowing you to perform an efficient strike.

PACKAGE OF SHADS TIOGA 2"/2,9"/3,4"

Tioga is a lure designed specially for perch and pike-perch fishing. The unique shape of the body provides movements in the water generating swings attracting a predator. The side ribs strengthen the play of the lure, providing it with «live» movements. The hybrid lure has a worm-shaped body with the typical thickening at the front and small claw-tail of the shad. The lure has the attractive smell of mackerel. **Tioga 2"** is the best lures for micro jig, it can be installed both on a jig-head and on an offset hook. Bigger lures **Tioga 3.4"** are perfect for classic jig, and **Tioga 2,9"** can be successfully applied to many kinds of different rigs with a lead. The smallest lures attract the attention of perch and ratan goby and other micro jig fish. Bigger models will get interest of pike and pike-perch. Scent&Taste Inside Formula ensures that after the biting the fish will keep a bait in the mouth as long as it is possible. It will always allow performing of timely and successful hooking.

PACKAGE OF SHADS MR. GREEDY 3"/3,9"/5,0"

Mister Greedy is a soft lure made from salty soft plastic. The lure has a body shape, fleshy enough, designed for pike-perch or pike fishing. The lure perfectly matches with classic jig or different installations with an offset hook at shallow waters. The **Mister Greedy** lure can be efficiently applied to pike fishing in weedy places without additional load. Scent&Taste Inside Formula ensures that after biting a pike and a pike-perch will keep bait in the mouth as long as it is possible.

PACKAGE OF SHADS MINNOW 2,2"/3,3"/4,4"/5,5"

LJ MINNOW is the most popular model of a shad with a classic shape. The shape of the lure's body resembling a little fish along with a tail fin generate incredible swings when moving in water. The material used in **LJ MINNOW** soft lures deserves particular attention. The base of the lure is soft plastic, which perfectly retains the shape of the lure and is resistant to external impacts. It has certain immunity to predator's teeth, withstands a lot of bites and is firmly attached to the hook. The lure has an explicit taste and scent of mackerel due to the aromatic salt introduced in the structure of the material and a special aromatic oil used as the coating of the lure. It would be no exaggeration to state that the combination of soft plastic resistant to predator's teeth, a strong attractant and a wide range of colours makes this lure universal for any type of angling for the most popular predatory fish, such as pike, pike-perch and perch, using jig tackle.

PACKAGE OF SHADS LONG JOHN – NEW EDITION 3,1"/4,2"

Long John is the model of one of the most popular shads in the world. The stretched shape of a body provides it with the unique effect of "wriggling" lure. This shad is justly known as a real pike-perch „killer“. The **Long John – new edition** lure is applied both to fishing with classic jig and with other spinning rods tackles. It is completed not only with renewed shape of the well-known lure, but also with a new formula of an attractant with mackerel flavour integrated into the lure material composition. The modern colour-grade can turn every event of fishing to be fascinating and profitable. Perfectly chosen sizes of the body and the tail always provide steady operation of the lure with loads of different weights. The lures Long John – new edition 7.9 cm comes in fourteen different colours.

PACKAGE OF S-SHAD TAIL 2,8"/3,8"

S-SHAD TAIL is a shad with an elongated ribbed body. Due to the original shape of the lure, its body has a different cross-section in its front and rear parts; such geometry of the lure's body ensures its special play, attracting any predator. **S-SHAD TAIL** is made according to advanced technology. It is a lure from the so-called class of scented. The lure has explicit taste and scent of mackerel due to the aromatic salt introduced in the structure of the material and a special aromatic oil used as the coating of the lure. The lure is made of very soft silicon, which, along with aromatic and flavour properties, confuses the predator; it keeps holding the lure in its mouth, allowing you to make a confident strike. After fishing, it is recommended to put the lure back into its packaging, since it contains aromatic oil and the so-called "re-charge" of the lure takes place. **S-SHAD TAIL** is a great solution for angling from early spring to late autumn.

PACKAGE OF HAMA STICK 3,5"

In terms of geometry, the stick-bait has long stretched body without any evident outdents and active elements, which actually makes it a passive lure. **Hama Stick** is in demand for drop shot angling, as well as in heavily overgrown water bodies. The lure is mounted on an offset hook without a split shot, the tip of the hook is hidden in a special indent thoughtfully designed by LJ experts. Thus, the lure smoothly goes through heavy tangled water vegetation. Due to the use of soft and flexible plastic, **Hama Stick** realistically plays in the water, provoking the predatory fish to attack. The predator that attacked the lure fearlessly swallows it; if the striking was not successful, having tasted the mackerel lure the predator makes repeated attack attempts until it catches the lure, thus multiplying the chances of the angler. **Hama Stick** lure has great casting range, which will appeal any angler! Apart from that, the lure is designed in attracting size and colour grade – perfectly imitates forage base of zander, perch and pike.

PACKAGE OF S-SHAD 2,8"/3,8"

Above all the **S-Shad** lure resembles a leech of medium size. This lure belongs to slugs and has a stretched worm-shaped flat body tapering towards the tail. The tail is slightly thickened and has two small tentacles on the end. There is a pocket on the back and the belly of the lure purposed for the offset hook sting. The **S-Shad** lure perfectly matches for all kinds of rigs with a lead: wire leader, drop shot, caroline rig, split shot and etc. As distinct from many slugs it has its own play and allows to diversify the lure's behaviour in the water. This lure can be used not only in the cold water for fishing of passive fish, but also for active predator angling. Among the additional advantages there are soft and in the same time durable material.

PACKAGE OF TWISTERS T.I.G. TAIL 2,8"

T.I.G. Tail is a lure, hybrid of a twister and a shad. This universal lure with the typical for shads „heel“ is not so simple as it may seem. It perfectly works during all kinds of retrieves, especially it is good for dragging over the bottom. The lure **T.I.G. Tail** has wider range of all kinds of possible animation than a classic twister. It includes light jerks by the rod tip making the lure move by small steps nearby the bottom and perform smooth swings providing wavy motions. This lure is oriented to middle size predator fishing. At that the unique diverse play of the tail provided by its unusual shape can upset equanimity even of a sated predator. If you love perch or zander or pike-perch fishing, it is the best lure for fishing with all kinds of installation: Jig Head Rig, Texas Rig, Carolina Rig, Terminal Rig, Drop Shot Rig and Double Hook Rig.

PACKAGE OF TWISTERS BALLIST 3,3"/4"

Ballist is a hybrid of a worm and a twister with a steady shrimp attractant. The lure has a stretched worm-shaped ribby body and a small soft twister tail. It can imitate both a leech or a big nymph and an oblong baby fish. It is manufactured in 10 colours including „acid“ and realistic colours. The **Ballist** lure perfectly matches to rigs with a lead – wire lead, Caroline or split shot. There are possibilities to perform animation of different types including slow and steady and similar to twitching with small jerks. The **Ballist** lures are very efficient in micro jig with slow reeling or with bait dragging over the bottom.

PACKAGE OF TWISTERS HOGY HOG 1,2"/1,6"

It is difficult to say, which food item is imitated by the lure Hogy Hog. It resembles both a small crustacean and a big slug of an insect: a small body, few pairs of legs, two "tentacles" and two massive "claws" in the rear part. The fantasy crustacean lure has distinct shrimp or crawfish flavour and scent; it is offered in several colours. The most universal colours for perch angling are considered to be the following colours: Osaka Pumpkin (PA19) and Mr.Brown (PA17). Special series with provocative colours is produced for trout angling: Pink Troutino (052) and Bubblegum (031). The lure Hogy Hog is well-suited for angling with spoon-baits with large and durable hook. If desired, the lure body can be easily shortened to the required length.

PACKAGE OF TWISTERS HOGY SHRIMP 3"

Hogy Shrimp is a lure imitating a fantasy underwater crayfish with many legs, which is really popular to hunt for among large perches and other predatory fish. **Hogy Shrimp** is a passive lure that is perfect for all kinds of mounting: a retractable leader, a Carolina tackle, etc.; as well as does not kink the fishing line. The composition of lure's material includes an attractant with the smell and taste of crayfish; therefore, the lure will preserve its taste properties for a long time. Hogy Shrimp lure is close to its natural food object in terms of the size and has "working" colour grade, which allows achieving biting even with passive fish. **Hogy Shrimp** is perfect for angling fish not only in fresh water, but also in the sea. During the tests, this lure helped catching dozens of scorpion-fish, sea pigfish and croakers!

PACKAGE OF SHADS BABY ROCKFISH 1,4"

NEW

The Baby Rockfish- one of our most popular soft plastic baits for ice fishing. This small paddle tail minnow imitation is infused with a strong mackerel scent that freshwater fish cannot ignore, utilizing the trademark Lucky John "Edible Bait" technology that features both wide scent dispersion and scent retention in the body of the plastic. The Baby Rockfish is designed to be small enough to be used with tungsten micro jigs for slab crappies and jumbo perch, but also punches well above its weight class while bringing in bigger predators such as trout and walleye.

FROG

Soft rubber surface lure – FROG. It is designed for angling in the roughest conditions, in heavily plant-filled water bodies, where the use of other lures proves unviable. The main intended target species – pike. The main method of guiding – light jerking of the lure with short intervals of 1-1.5 seconds. The strike should not be performed hastily in order to avoid low efficiency of bites. Thus, the following scheme is recommended. When you see that a pike has practically snatched the frog, don't pull the lure from under its nose or out of its mouth. On the contrary, you should ease the cord, wait for 1.5-2 seconds and only then make an accented strike.

LUCKY JOHN PRO SERIES WOBBLERS

Magnetic Cast System (MCS) – a system consisting of a magnet and fixed and static balls, which allows casting a lure for the longest distance possible without kinking and dead on target. This system ensures qualitative balancing and easy handling of a wobbler at any type of reeling. **MCS** system is the first patent in the production of PRO Series wobblers.

How does **MCS** system work? During the casting, the ball is detached from the magnet by the centrifugal force and rolls to the tail end of the lure, thus shifting the centre of gravity. After touching the water, when the reeling starts, the ball rolls to the head end of the wobbler, where it is fixed by the magnet. To ensure roll stability, there are five balls located in special compartments of the lure: three in the head end, and two – in the tail end. During the reeling, these balls have low degree of motion, thus allowing aggressive reeling with the lure.

Outside Stabilizer System (OSS) – a system of external stabilization of a lure with the help of a tungsten ball. The lower part of lure's head features a special capsule with a tungsten ball next to the dropping blade. As continuous tests of such design have shown, the weighted upper part of crank-baits is what creates distinctive vibration. **OSS** is not only additional vibration of the lure during the reeling, but also additional increase of flying

range. At the moment, **OSS** system is the most effective stabilizing system of crank-bait class lures.

Original colours

Shades: 101, 103, 107, 108, 109 and 110 – original design of the "bloody" series.

Lucky John Series. Shades 302 and 303 deserve special attention as they have the ability of glowing in ultra-violet rays (**UV**) and the shade 205 in turn has "fish" bones that glow.

Original camouflage army shades are also interesting: 503, 504, 505 and 506. As the tests have shown, these shades do not scare away the predatory fish, when it is particularly cautious. These shades are more effective than any others, either in muddy water or during sunny weather. The following shades have been developed specifically for the **ANIRA** lure: 111, 113, 304 and 305.

LUCKY JOHN PRO SERIES MAKORA WOBBLERS

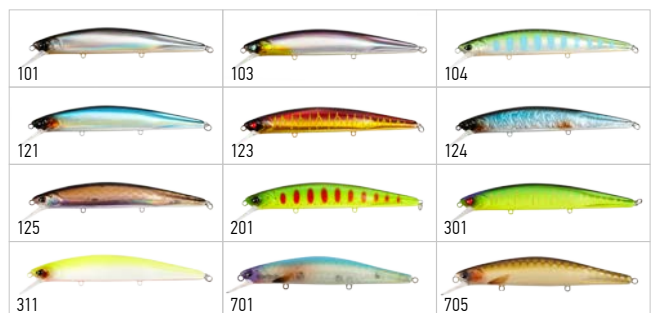

Makora is the classic series of jerk-baits designed in two sizes of 110 mm and 130 mm particularly popular for angling predatory fish. The wobblers of these series are distinguished by their unique play they demonstrate during both jerking and even guiding. By deviating from the line of guiding and moving in wide tacks, these wobblers attract pike. Its body combined with the weight specially designed by Lucky John specialists makes the wobbler move from side to side and turning a little around its axis when jerking, thus perfectly affecting predatory fish during the pause. The system of long casting **Magnetic Cast System** helps in casting the lure at long distances and with high precision. The wobblers of these series come in two versions – floating and neutral floating ability, which ensures a wide scope of application. Three triple hooks reduce the possibility of hook pulls to the extent possible.

LUCKY JOHN PRO SERIES BASARA WOBBLERS

A series of jerk-bait wobblers class that are manufactured in the following sizes: 35, 40, 56, 70 and 90 mm. Two buoyance modifications are represented in each size group, except for 35: floating and suspender. 35 mm size is available only in floating version with an enlarged dropping blade (LBF). Due to MCS system, all of the **BASARA** Series wobblers have excellent flying properties and allow highly aggressive animation of the lure. The main angling target: any predatory fish.

NEW

A new addition to the best selling Basara line this year is the Basara 90 Floating and Suspending crankbaits. This longer version of the Basara model offers a bigger package in response to angler requests for a bigger, deeper diving model. The Plus One features a reconfigured and elongated lip that now allows this big and bad Basara to dive down to depths of 3 meters, making it a great choice while trolling for walleyes. Offered in 14 dynamic and realistic finishes, all Basaras feature both the finest in Japanese hooks, as well as the patented Lucky John Magnetic Cast System, ensuring the most realistic baitfish movement to gather the attention of predator gamefish worldwide.

WOBLERS LUCKY JOHN PRO SERIES KUBIRA

KUBIRA PLUS ONE 110F is a deep-water lure, designed for angling large predatory fish at a depth of up to 3.8 metres. The size of the lure is 110 mm and its weight is 16 grams. It is supplied in a floating design. These wobblers are distinguished by their unique play they demonstrate during both jerking and even guiding. This wobbler can be used for trolling as well. The dynamic play of the lure attracts pike, pike-perch and large perch. The system specifically designed and patented by **Lucky John** specialists **Magnetic Cast System (MCS)**, using a magnet, moving and fixed balls, allows casting the lure to the maximum distance possible. The **MCS** system makes the wobbler to move easily from side to side and make light swings around its axis when jerking, thus perfectly affecting predatory fish. The lure is equipped with two powerful triple hooks, which allow reducing the possibility of hook pulls to the extent possible.

LUCKY JOHN PRO SERIES ANIRA WOBBLERS

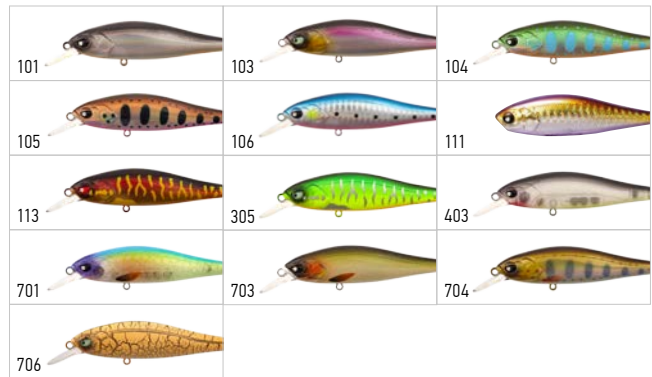

If you need a lure for angling predatory fish in shallow water, **ANIRA** series of wobblers will be the best choice. Wobblers have stable intense small-frequency playing. They are perfect for any type of reeling: steady or jerking (twitching). The lures are manufactured in 39, 49 and 69 mm sizes and only in the suspender version. The smallest size – 39mm, has an enlarged dropping blade (**LBSP**). The lure shows the best results in shallow still water bodies or water bodies with slow current. During the pauses, the lure remains in one place, thus provoking the predatory fish to attack. Due to **MCS** system, all of the **ANIRA** Series wobblers have excellent flying properties and allow highly aggressive animation of the lure. The main angling target: perch and pike.

LUCKY JOHN PRO SERIES ANTIRA WOBBLERS

Lucky John presents a novelty in 2016 – a series of unique composite wobblers-minnow with an original design, the **ANTIRA SWIM 115**. The small tail serves as an additional lure for predators when the wobbler moves. The special trait of wobblers from this series is their unique play, which they demonstrate both during jerking and even guiding. **ANTIRA SWIM 115** is simply irreplaceable when you need to guide the lure practically on the surface while uncovering at the same time all the unique possibilities of its play. This wobbler is designed for point fishing in certain water areas. Its lures in even passive predators. Wobblers of this series come in two versions – floating and of neutral floating ability, which ensures a wide scope of application.

LUCKY JOHN PRO SERIES HAIRA SHALLOW PILOT WOBBLERS

This small wobbler with thick body and the size of 33 and 44 mm is a lure of crank-bait class and comes only in the floating version with a small lip. Maximum depth of the lure at fast reeling is just 20 cm. Once stopped, the wobbler quickly surfaces, thus allowing effective animation, while successfully avoiding underwater obstacles: water vegetation and snags. At steady reeling, the wobbler moves with intense playing: vibrating with high frequency with all its body at minimum amplitude. The wobbler creates a noticeable wave behind it, which attracts any predatory fish. Due to **OSS** system, all of the **Haira Tiny Shallow Pilot** wobblers have additional vibration of the lure during the reeling and increased flying range. The main angling target: chub, trout, asp, perch and gar.

LUCKY JOHN PRO SERIES HAIRA PLUS ONE WOBBLERS

Modification of the floating version of Haira Tiny wobbler manufactured with a long lip (**LBF**). This lure of crank-bait class is able to dive up to 1 metre, which is why it was given such name. The best animation of the lure would be to interchange small accelerations and stops during the reeling. Most of the biting occurs at the moment of stop – stay focused! **OSS** stabilization system perfectly orients the lure in the water regardless of whether there is current in this place or not. Due to **OSS** system, all of the **Haira Tiny Plus One** wobblers have additional vibration of the lure during the reeling and increased flying range. The main angling target: chub, trout, asp, perch and gar.

LUCKY JOHN PRO SERIES LUI PENCIL WOBBLERS

The wobbler LUI PENCIL 98 is a classic "walker", which can be used for angling in shallow and densely overgrown places of rivers, lakes and water reservoirs, where the use of other lures is irrational. These lures are mainly distinguished by their behaviour on water – due to the shape of its body and the balance specifically designed by Lucky John specialists, LUI PENCIL 98 easily glides on the surface, smoothly moving from side to side and drawing an imaginary snake on the surface of water. Such behaviour of the lure attracts even passive predatory fish hiding in the water. By using the system of fixed balls inside the walker, Lucky John company has managed to achieve perfect flying properties of the lure. Powerful qualitative triple hooks manufactured in Japan allow for reducing the possibility of hook pulls to the furthest extent possible.

LUCKY JOHN PRO SERIES VIKARA WOBBLERS

VIKARA 62S is a lure with an eyelet for fastening the fishing line to its back, distinguished by the absence of a lip and a high profile of the body. Sinking wobbler. Its length is 62 mm and weight is 13 grams, and it allows angling at the depth of up to 5 metres. The wobbler has high-frequency swings of the body during guiding and a loud noise system, which attracts the fish in muddy water. The body of the lure features a chamber with metal balls, which create rhythmic sounds by hitting the walls of the chamber during movement, which the fish is unable to resist. A lip-less design allows angling the fish, using different methods of animation from steady to gradual, thus enhancing the possibilities of the lure. The lure is equipped with high-quality hooks made in Japan.

SPINNERS

LUCKY JOHN BONNIE BLADE

Bonnie Blade is a series of Lucky John spinners. These lures combine modern design solutions that ensure reliable and stable playing of spinners and, most importantly, make them very attractive for any predatory fish.

A spinning blade is the main element of the spinners. It is lightweight, is made of brass and has good dynamic properties when spinning in the water, thus it allows performing reeling of the lure at minimum speed. The blade is wound up as soon as the spinner starts to move. The blades are painted from both sides. No matter from which side the fish is looking, blade's colour will remain the same and attractive, which increases the interest of the fish in the lure and, as a result, ends up in an effective attack.

Another important element is a mandrel, which influences the weight and casting range of the lure, as well as its stability in the water. Two types of mandrels are used in Bonnie Blade spinners: with balls and cylindrical. Thanks to the main ball, the centre of gravity of the spinner is shifted to its tail end, thus increasing

the casting range of its smaller models. A cylindrical mandrel of larger models is made of brass with crosswise grooves, which, undoubtedly, increase lure's attractiveness, as well as stabilize its horizontal position when moving in the water.

Metal ball-bearings and a reflective cone are intended for easy spinning of the blade around its axis and prevent its "sticking". Rigid fixing wire of the blade, which is made of steel unriveted wire drilled from the sides, ensures complete freedom of spinning of the blade with minimum friction with the axis of the lure.

All the trebles have a bright fly, the main function of which is to take away all the doubts from the predatory fish ready to attack. Moreover, the fly plays the role of a stabilizer of horizontal stability. The base of the spinner is stainless carbon wire. Its axis will not deform in extreme situations, and the lure will always be in operable condition. Six sizes and eight shades allow finding the right lure almost for any conditions of spin angling of perch, pike, trout or salmon.

ITEM NO.	COLOUR	WEIGHT (G)	Q-TY IN PACKAGE (PCS.)

SPINNERS

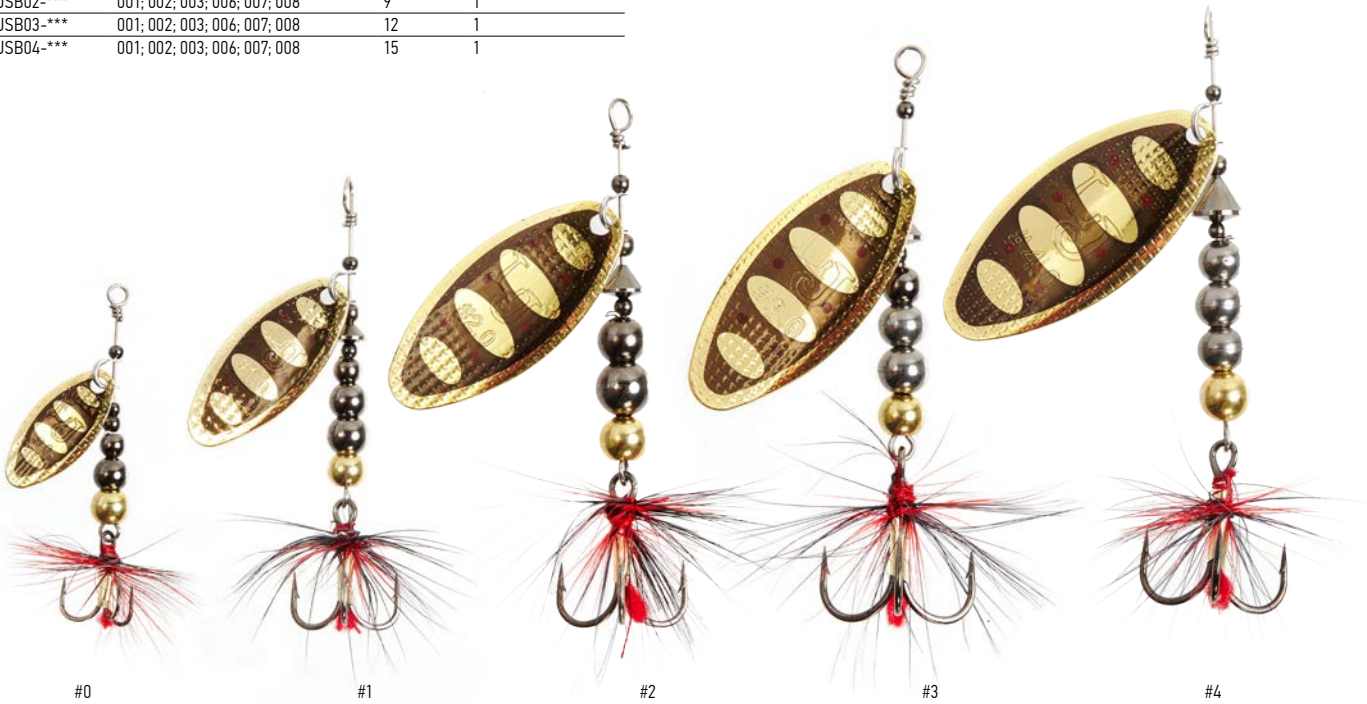

LUCKY JOHN SHELT BLADE

Shelt Blade is the series of spinners from Lucky John. These lures use modern design solutions, which ensure reliable and stable action. It is lightweight, made of brass, and has good dynamic properties when rotating in water, thus allowing the guiding of the lure at minimum speed. The blade kicks into gear as soon

as the lure starts moving. The blades are painted from both sides. Regardless of the angle, at which predatory fish looks at the lure, its colour remains equally attractive. All triple hooks feature a bright fly, the main purpose of which is to take away any doubts from predatory fish which is ready to attack.

LUCKY JOHN

TRIAN BLADE ROUND

Trian Blade Round is the series of spinners from Lucky John with a classic oval shape of the blade. These lures use modern design solutions, which ensure the reliable and stable animation of spinner and make them highly attractive for any predatory fish. The rotating blade is made of brass and has steady movement at different methods and speed of guiding. When rotating, the angle of deviation of the blade is 60 degrees. The

blades are painted from both sides, thus causing high interest of the fish. The body of the lures is made of heavy alloy, ensuring additional casting distance when casting the spinner, and has an adjusted geometric shape of the core, which allows reducing the twisting of the line during the play of the lure to the extent possible. All triple hooks feature a bright fly, which serves as an additional exciter for the fish.

TRIAN BLADE LONG

Trian Blade Long is the series of spinners from Lucky John a classic shape. These lures use modern design solutions, which ensure the reliable and stable animation of spinners and make them highly attractive for any predatory fish. The rotating blade is made of brass and has steady movement at different methods and speed of guiding. The holes in the blade create additional swings, which are more attractive for predatory fish. When

rotating, the angle of deviation of the blade is 30 degrees, which allows the lure to work in case of a strong current. The body of the lures is made of heavy alloy, ensuring additional distance when casting the spinner, and has an adjusted geometric shape of the core, which allows reducing the twisting of the line during the play of the lure to the extent possible. All triple hooks feature a bright fly, which serves as an additional exciter for the fish.

LUCKY JOHN SPINNERS FOR TROUT ANGLING

The number of fee-based water bodies, where the angling of pond rainbow trout is allowed, grows each year. It is not a secret that the Area Fishing – trout angling in artificial water bodies – is a rapidly developing issue. It is, probably, one of the most accessible variants of fishing, with a spinning rod, for metropolitan citizens and people, the flying pace of life of which allows devoting just a mere couple of hours a week to the beloved hobby. Being able to “hold” 1-kg or bigger trout on the lightweight spinning rod, many anglers forever become the fans of this type of fishing. Keeping up with the time, a new series of micro spoon-baits has been introduced in the assortment of Lucky John lures for angling pond and wild trout: AYU and IMA. The main component of any successful angling is the availability of appropriate tackles: UL-class spinning rod (with the test of up to 5 g); thin braided wire, or even better – monofilament fishing line with the diameter of up to 0.18 mm; and lightweight minimum-size spinning reel. AYU and IMA trout spinners are equipped with qualitative Japanese sports hooks. Do not be confused that this a “single piece” with no groove on it, as it turns out it is completely unnecessary. In Japan, just as in many other countries, they have been long prohibited. The number of escapes does not depend on its presence! All jerks of the fish are successfully damped by the spinning rod; it is preferable for the rod to be of medium-action type and the fishing line, as it has already been mentioned, to be monofilament, particularly for the minimum-size lures. If the fish is played with such balanced tackle, the trout will not open its mouth due to excessive effort of the angler, and the hook will not fall from its mouth, even if the fishing line is completely released. If the fish is played using aggressive and rigid fast action type spinning rod with braided fishing line, somersaults and zooms of the resisting fish are unavoidable. As a result, unbending of the hook takes place and, naturally, the fish escapes. Try angling with a UL spinning rod and Lucky John trout lures. You are going to like it! After all, these spinners are just as good for angling perch, red-eye, grayling, sabre-fish, asp, orfe, chub and other predatory fish, and even peaceful fish. But that is a completely different story... Good luck!

SPOON-BAITS LUCKY JOHN AYU

AYU spoon-baits are the most popular lures for trout angling, since “finding a key” to angling of this fish is the easiest with these lures. They have classic shape of a stretched drop, slightly bent profile of the body and the centre of gravity shifted to the tail. Thanks to the shape of the body, these spinners have good aerodynamic qualities and, hence, greater casting range. These spinners can be casted further than analogous lures of the same weight. When angling trout with **AYU** spinners, it is necessary to select appropriate weight of the lure, in order to ensure the required casting length up to the feeding fish. **AYU** spinners come in two sizes: 2.4 and 3.5 g. The lures are highly efficient when angling the fish in shallow water and mid-water. Once the lure gets into the water, it creates an attractive splash for the trout.

The heaviest spinner might be dragged practically along the bottom at slow reeling. This spinner can be successfully used for different types of reeling: steady, with slight twitching, “Stop&Go” or “Lift&Fall”. The type of reeling is to be selected depending on trout’s activity; however, the most effective type in most of the cases is steady reeling. You can start winding the fishing line immediately after the spinner gets into the water or a few seconds of its free dropping. In any case, partial braking of the fishing line has to be done once the spinner falls into the water, in order to avoid sagging of the fishing line and lying of the hook on top of lure’s body. Only under these conditions, in case of biting, will it be able to strike the fish. **AYU** spinners are equipped with high-quality Japanese sports hooks and qualitative accessories.

ITEM NO.	COLOUR	WEIGHT (G)	LENGTH (MM)

SPOON-BAITS LUCKY JOHN IMA

The **IMA** spoon-bait has the shape of a stretched rhombus with indent surface. The main purpose of the lure is trout angling in surface layers of water. Thanks to their shape, **IMA** spinners keep well the reeling horizon at minimum depth and, once stopped, quickly sink. **IMA** spinners come in one sizes: 2.1g. This spinner is more universal and has the greatest casting range in this series. At the same

time, the deepest reeling can be performed with it. It is highly convenient to search for trout with **IMA** spoon-bait, when the fish is particularly active: during twilight, before the sunrise, at the dawn, and immediately after casting the lure. The best results are usually achieved under these conditions. **IMA** spinners are equipped with high-quality Japanese sports hooks and qualitative accessories.

SPOON-BAITS LUCKY JOHN EOS

Lucky John EOS is the series of swinging spoon-baits for light and ultra light spinning fishing, which are designed for angling trout. These spoon-baits meet all the requirements set for the lures for angling trout in paid water bodies and angling fish in natural water bodies and rivers with medium current and small depth. EOS spoon-baits have a deep bent-in profile with a special bent shape of the tail part, which ensure their peculiar play during both guiding and free sinking. During guiding, the lure moves strictly along the line without any wide swings from side to side – its movements resemble

the play of wobblers of crank-bait type. The lure has a good gliding effect, which allows using it for angling at breaks and during the free fall. Due to its insignificant weight, the spoon-bait can be guided along the very surface of the water. The smallest sizes are: 2,4, 3,5 and 5g are designed for angling in shallow water; they are supplied with sports-type single hooks. The spoon-baits weighing 8 g are perfectly suitable for angling in deep places, they are supplied with **triple hooks**. The lure is perfect for angling asp, pike, chub and perch. EOS spoon-baits are equipped with high-quality Japanese hooks and fittings.

LUCKY JOHN SPINNER BAITS

Spinnerbaits are artificial lures that do not resemble any living prototypes, either fish or other aquatic creatures. Nevertheless, these lures are effective for catching pike and large perch. On certain days, spinner baits can even deliver the best results for pike! This fantasy lure consists of spinning blade, and a loaded single hook with elastic synthetic skirt mounted on a wire frame.

JIGHEAD LUCKY JOHN WORM DRIVER

The series of loaded off-set hooks, the weight of which is located closer to the front part or in the middle of the shank. The use of these hooks is recommended when angling in coastal bushes of cane, reed or other vertically located vegetation. This assembly method allows for guiding the lure with minimum speed in a rather narrow corridor of clear water, reducing the possibility of catching water vegetation to the extent possible. During the pause, while sinking slowly, the lure rolls from side to side, causing a passive predator to attack.

HIGH-QUALITY HOOKS – LUCKY JOHN

A series of high-quality hooks from LUCKY JOHN for angling of predatory fish is designed for sportsmen and “advanced” anglers. And there is nothing surprising about it – LUCKY JOHN hooks are made only in Japan, in the best specialized factories of the country. In their production, only the highest-quality materials and modern technologies are used. All these factors serve as a guarantee of the highest consistent quality of the hooks. Special technologies, designing, production and testing of the new series of LUCKY JOHN hooks allowed the manufacturer to satisfy all requirements of professional sportsmen regarding the main part of tackle:

- strict technological quality control on every production stage
- special carbon-alloyed steel
- modern heat treatment technologies
- high strength
- finest sharpening of hook point
- durable anti-corrosive coating

SWIVELS, SNAPS LUCKY JOHN PRO

Swivels and snap swivels represented by these models are made in Japan at a specialised factory. All of these parts that are obligatory components of a complete set of fishing tackle are made of high-grade steel on modern equipment and meet the strictest fishing requirements. The highest quality of this connecting accessory will prevent the loss of both trophy fish and valuable lure. It is not customary to be thrifty with such small things.

SWIVELS, SNAPS LUCKY JOHN

Not a single fishing tackle can do without these important little things. If you don't know about these connective pieces or use pieces of a doubtful quality, your fishing experience will likely be spoiled. In fact, in an overwhelming majority of cases, fishing without these small pieces is simply impossible! With their help, it is possible to prevent your fishing line from twisting or getting tangled. They also make it possible to tie a mobile retractable leash and quickly change a wobbler or spoon-bait on a spinning rod. This group consisting of snaps, swivels with snaps, swivels and rings is manufactured at a specialised plant. This ensures all of these products correspond to the fishing parameters indicated on the packing.

LUCKY JOHN PRO LEADERS

It is impossible to catch predatory fish, mainly pike, without leaders. In addition, catfish would easily bite through a fishing line with its sand-paper-like teeth while playing it. In order to avoid losing a cherished trophy, it is possible to select any leader with its own characteristics. All of them are represented in this section.

LUCKY JOHN FLIPPING&PITCHING HIGH SENSORIC MISSION - CASTING RODS

Lucky John Flipping & Pitching High Sensoric Mission – premium-class casting rod made of high-modulus T30 graphite with the use of high-quality Fuji accessories. The rod was specially designed for bass angling with flipping or pitching – these are the techniques which imply rough angling conditions in “tight” places, where the power margin and

restraining resource are of vital importance. And these are the qualities this rod has in abundance. Another specific trait, evident from the name of the product, is blank sensitivity – it is really good here. Blank material – 40T graphite. Rod guides – Fuji KR. The diverse handle is made of EVA material and perfectly fits the angler’s hand.

ITEM NUMBER	LENGHT (FT/M)	CLASS	ACTION	CASTING WEIGHT (G)	SECTIONS	TRANSP. LENGHT (CM)

LUCKY JOHN MICRO JIG & ROCKFISHING HIGH SENSORIC MISSION

Lucky John Micro Jig & Rockfishing High Sensoric Mission – a rod series specially designed for micro-jig angling. These super-light, premium-class spinning rods are made of high-modulus T30 graphite and equipped with high-quality Fuji accessories. Although elegant, these rods have a high restraining resource, which helps to handle big and strong fish. Its glued-in white

top allows to visually trace the guiding of the light lure and any touches to it from shy fish. Blank material – 40T graphite, rod guides and arrangement – Fuji KR Concept. Case of lightweight rod guides – titanium. The comfortable, diverse handle is made of EVA material and perfectly fits the angler’s hand.

LUCKY JOHN ONE SENSORIC FRESHWATER JIGGING ROD SERIES

Lucky John One Sensoric Freshwater Jigging Rod Series – a series of modern spinning rods created by Japanese engineers for jig angling and jerking lures. The load-bearing design of the rod allows fast luring of fish in rough conditions, including the natural conditions among the plants in a water body. A well-balanced rod makes it easy to work with different lures and angling methods. The typical feature of the whole spinning rod

series is their high tactile sensitivity, due to which they can accurately transmit a lure's swings to the angler's hand during guiding. Blank material – 40T graphite, rod guides and arrangement – Fuji KR Concept. Case of lightweight rod guides – titanium. A special style is given to this rod by an expensive mahogany handle, which proves its uniqueness among all other spinning rods.
