LUCKY JOHN TECHNICAL SOLUTIONS AND CHARACTERISTICS OF REELS

	Star Drag Friction Brake	Mechanical, multiple disk friction system for spool braking.
	A mechanical braking system	The simplest spool braking system when casting a lure.
	A centrifugal braking system	A 6-position centrifugal braking system that ensures the fine adjustment of the brake – free spool rotation.
	Magnetic drag system	With this drag system you can adjust your reel drag in very sensitive mode.
	Bearings	The ball bearings are made with high precision. They ensure the smooth rotation of the reel mechanism and assemblies. Roller bearings withstand higher loads than ball bearings, they are installed in the most important and most loaded assemblies of the reel mechanism. They ensure the operability of the reel anti-reverse mechanism. Both ball and roller bearings significantly increase the reel's operation life.
	Ball bearings	The ball bearings are made with high precision. They ensure the smooth rotation of the reel mechanism and assemblies; they also increase the reel's operation life.
	Reinforced, stainless steel ball bearings	The bearings are designed for increased loads. They have an increased operational life. Bearing material is not subject to corrosion.
	Gear ratio	The gear ratio is one of the main technical characteristics of the reels and indicates the number of rotations of the spool made per turn of the reel handle. The higher the gear ratio, the higher the speed of the winding, and, accordingly, the lower the gear ratio, the lower the winding speed.
	Instant anti-reverse (IAR)	A special mechanism of the overrunning (backstop) clutch that prevents the minimum reverse rotation of the reel rotor. This eliminates all impact loads on the mechanism while playing the fish.
	A fishing line laying mechanism with an "worm shaft"	A special mechanism of laying the fishing line on the spool that guarantees a uniform, cross laying of the line while spooling.
	Aluminium body	This reel body is made of durable aluminium alloys.
	Graphite body	This reel body is made of special, durable plastic (graphite).
	Main aluminium spool (lightweight)	The spool is made of aluminium alloys (with special holes in the body that make it lightweight).
	Main aluminium spool – Cold-forged – with steel skirting	The spool is made by cold forging blanks from a special aluminium alloy. The spool skirting is made of polished steel.
	Main graphite spool	The spool is made of special, durable graphite.
	Spare aluminium spool	The spare spool is made of aluminium alloys (with special holes in its body to make it lightweight).
	Spare graphite spool	The spare spool is made of special, durable graphite.
	Big line roller, extended (anti-twist)	The increased conical roller prevents the fishing line from twisting and ensures a more reliable, and non-slip passing of the fishing line through the roller when winding the line.
	Hollow bail wire (lightweight)	The lightweight bail of the fishing line laying mechanism. The bail has a hollow shape and is made of stainless steel.
	Worm shaft line roller	The design of the fishing line laying mechanism ensures the uniform cross laying of the fishing line or cord on the spool of the multiplier reel.
	Wear-resistant titanium nitride coating	A modern and the most wear-resistant coating applied to the main material of the reel parts. It ensures maximum longevity for friction surfaces.
	Wear-resistant chrome coating	A wear-resistant coating applied to the main material that ensures greater longevity for friction surfaces.
	Aluminium handle, machined	The reel handle is made by means of building the blank from durable aluminium alloys.

LUCKY JOHN SPINNING REEL MAKORA SERIES

The series reels are intended for experienced and demanding anglers who devote a lot of time to fishing. MAKORA series reels meet the highest requirements. Produced at factories with the highest technological discipline and using the most contemporary equipment. The model design of MAKORA series comprises professional and necessary solutions.

ITEM NO.	SERIES	MODEL	SIZE	DRAG	BB	RB	M/MM	WEIGHT (G)	GEAR RATIO	SPOOL	SPARE SPOOL
SPINNING REEL MAKORA SERIES											
LJ-9215FD	Makora	SPIN 8	1500	FD	7	1	130/0,205	257	5,1 : 1	1Al	–
LJ-9225FD	Makora	SPIN 8	2500	FD	7	1	150/0,235	259	5,1 : 1	1Al	–

Special spool lip shape for easy line dropping

Stronger aluminum joint for handle attaching to the reel body

SPINNING REEL MAKORA SPIN 8

Reel for demanding anglers made in strict design. The high precision of manufacture ensures perfect line lay. Special spool lip shape ensures longer casting distances and prevents from loop dropping.

- ▶ Front drag FD
- ▶ 7 ball bearings
- ▶ 1 roller bearing
- ▶ Instant anti-reverse
- ▶ Reel body and rotor made from high durability plastic
- ▶ Spool- lightweight aluminium
- ▶ Thick bail arm, lightweight
- ▶ Handle:
 - Aluminium CNC handle
 - Screw type
 - Possibility of right/left placement
- ▶ Ergonomic rubber handle knob

ITEM NO.	SIZE	BB	RB	M/MM	WEIGHT (G)	GEAR RATIO

LJ-9230FD	3000	7	1	150/0,285	302	5,0 : 1

LUCKY JOHN SPINNING REEL ANIRA SERIES

The reels of this series are characterized by high quality, reliability and functionality. Due to the competent use of modern materials and technologies, the manufacturer was able to offer anglers a fairly high class of spinning reels for the quite reasonable cost. These reels will find its fans both – among experienced anglers and the majority of anglers.

LJ-2030FD	3000	7	1	140/0,285	300	5,1 : 1

BLANK MATERIAL

The blank material of the fishing rod is carbon fibre

The fishing rod blank is made of carbon fibre. Carbon fibre is very durable; because of this, fishing rod walls are made very thin and the fishing rod has a minimal weight and high sensitivity.

ACTION TYPE

Blank action type – composite

The upper 1/3 of the blank bends when being loaded.

Blank action type – medium-composite

The blank bends between the upper 1/3 and 1/2 when being loaded.

Blank action type – medium

The upper part of the blank bends when being loaded.

CLASS

UL spinning rod class

Spin fishing rods designed for casting lures weighing up to 5 grams.

L spinning rod class

Spin fishing rods designed for casting lures weighing from 3 to 15 grams.

ML spinning rod class

Spin fishing rods designed for casting lures weighing from 5 to 20 grams.

M spinning rod class

Spin fishing rods designed for casting lures weighing from 7 to 30 grams.

MH spinning rod class

Spin fishing rods designed for casting lures weighing from 10 to 45 grams.

FISHING ROD CONNECTIONS

In Steek connection

Fishing rod pieces are connected by fitting the upper piece into the lower one.

GUIDES

Guides with SIC inserts

The fishing rod guides have silicon carbide (SIC) inserts. These wear-resistant guides allow stranded cord to be used for.

ARRANGEMENT OF GUIDES

Guides arranged according to a new concept

Arrangement of the fishing rod guides according to a new concept allows uniform load distribution on the upper blank part of the spinning rod to be achieved. Small diameter guides in the upper blank part used for this purpose do not disturb the dynamic features of the spinning rod. In this case, the number of Guides is greater than in the case of arrangement by traditional approach.

HANDLE

Handle

The convenient shape of the cork handle lets you performing continuous manipulations with the fishing rod while fishing – Ergonomic cork without any discomfort for the angler's hands.

Neoprene ergonomic handle

The convenient shape of the neoprene handle lets you perform continuous manipulations with the fishing rod while fishing, without any discomfort for your hands.

REEL SEAT

Screw-type reel seat

The reel is composited in the reel seat by the special locking nut, which has a lock that rotates along the line.

LUCKY JOHN SPINNING RODS PROGRESS SERIES

Rods of this series are designed for anglers seeking maximum quality and functionality for a reasonable price. The blank is made of 30T HI-modulus carbon that provides good sensitivity. Modern KR guides with SIC inserts are installed on the blank. Rods handle is made of hard EVA material with an ergonomic Lucky John reel holder, which excludes palm contact with screw threads. All rods are designed bright and attractive making fishing an aesthetic pleasure.

BRAIDED FISHING LINE **VANREX X8**

NEW

A modern 8-strand braided fishing line made of PE fibre. The round cross section of the line in combination with a smooth and "slippery" surface provides a long casting distance of the bait: jig-head, wobblers or a spinner. High braid density and increased durability allows the line to be used in all-seasons. Supplied in individual package – 120 m length. Excellent combination of price and quality.

- ▶ High strength
- ▶ Round cross section
- ▶ Increased durability
- ▶ Maximum casting distance
- ▶ All-season usage
- ▶ Green colour

BRAIDED PE FISHING LINE **BASARA**

A High-quality braided fishing line with a round cross-section, made of PE fibre. Due to the use of special fibre processing, the fishing line surface has become more "slippery", which allows to achieve maximum distance when casting lures and considerably increasing its durability. LUCKY JOHN BASARA braid fishing line is notable for high braid density, low stretch coefficient and increased durability. The braid fishing line is highly sensitive and ensures permanent contact with the lure, regardless of the distance to it, which is very necessary for timely hooking. Its high strength allows thinner diameters of braid fishing line to be used, as well as the angling of big fish. Fibres of the braid fishing line are practically unsaturated with water, which, combined with special impregnation, makes fishing possible even in low temperatures. Double "PALOMAR" knot is recommended for attaching lures. BRAIDED PE FISHING LINE BASARA

- ▶ High strength
- ▶ Round cross section
- ▶ Increased durability
- ▶ Maximum casting distance
- ▶ All-season usage

BRAIDED FISHING LINE AREA TROUT GAME

Specialized thin braided line for area trout fishing. 4-strand braided fishing line made of PE fibre. Due to the round cross-section and special coating, the line perfectly slides through the guides, allowing to cast small baits for long distances. Due to the very low stretch the braided fishing line is highly sensitive and this makes it possible to maintain constant contact with the bait and feel the smallest bite of the fish. Pink colour in combination with thin diameters does not frighten trout and the number of bites increases. Supplied in individual package – 75 m length.

MONOFILAMENT FISHING LINE FLUOROCARBON ARBA TROUT GAME

Special fishing line made of fluorocarbon and designed for angling trout and other cautious fish. The transparent colourless fishing line is invisible to the fish in the water. The material is soft, wear-resistant, heavier than water and invisible in water. When storing and using, fluorocarbon is a lot more durable than any nylon fishing lines. The fishing line is unreeled onto high-tech doughnut spools of 150 metres. The fishing line is produced and unreeled at a specialised factory in Japan.

- ▶ 100% fluorocarbon
- ▶ invisible in water
- ▶ enhanced abrasive wear-resistance
- ▶ enhanced softness
- ▶ sinking fishing line
- ▶ durable at the knot
- ▶ durable when storing and using

MONOFILAMENT FISHING LINE FLUOROCARBON HARD

NEW

Fast-sinking (specific weight – 1,78 g/cm³) durable fishing line designed for tying leaders and shock leaders. Fluorocarbon is invisible in water (light refraction angle is the same as with water), does not absorb water and retains its durability for a long period. Low linear stretching ability prevents the thinning of fishing line and retains its durability, which allows making a stiff strike. The fishing line is unreeled onto high-tech doughnut spools of 30 metres. The fishing line is produced and unreeled at a specialised factory in Japan.

- ▶ 100% fluorocarbon
- ▶ Fast sinking
- ▶ Invisible in water
- ▶ High sensitivity
- ▶ Zero water absorption
- ▶ Enhanced wear-resistance
- ▶ Durable at the knot
- ▶ Transparent colourless fishing line

SOFT LURES LUCKY JOHN PRO SERIES

All Lucky John lures have stable flavour and smell (cancer, shrimp or mackarel). The flavouring and aromatic substances are not only applied to the lures surfaces, but also are the part of lures material. Scent&Taste Inside Formula guarantees that 65% of attractant is placed inside lure material, other 35% composes special substance used for lures treating before packaging. The attractant composition is a secret of Lucky John Company. This way in these lures made of the „eatable rubber“ an attractant is maximally kept for the long time. The colour-grade is also well matched, the range of lures includes all colours, popular among anglers, therefore, it is easy to choose the required one. For example, the popular among perch-anglers green-brown colour-grade is presented by few colours variants. Among them are Cola – well-known „engine oil“ and close to this colour Nagoya Shrimp „american“, Green Pumpkin, Dark Green and Kiwi Seed. There are many other variants of colourations, so Lucky John has its solution for all kinds of predator’s mood.

FORMULA

Real Fish
ACTION

The secret of the efficiency of UNAGI SLUG lies in the lure's design. The Slug is divided by thin partitions into several sections. Even if jerks are very careful, the tail starts moving actively and attracts even the most passive fish. In the production of the silicone for UNAGI SLUG, attractant of shrimp is used – this guarantees results in any conditions of predatory fish angling. It is supplied in three sizes: 6.35; 7.62 and 8.89, which allow to find lure for angling various predators. Installation options can be different: "Carolina", "Texas", joint, dead-end installation, "Wacky" and lots of other interpretations. The main thing is the presence of a hook to allow using the constructive abilities of the UNAGI SLUG.

Floating
Soft
SYSTEM

DESIGNED IN
JAPAN

SCENT & TASTE
INSIDE
FORMULA

Real Fish
ACTION

Joco Shaker Super Floating is a lure with a classic shape of a shad and ribbed surface of the body. This is the first lure from the Lucky John series of **Floating Soft Plastic System** material. The material of the lure has extremely low density and, therefore, it is lighter than water. The lure will retain its floating properties even after its use on different tackle and after pike's "bites". The body of the lure contains an attractant with mackerel flavour, which is also applied to its surface in liquid form.

1. The lure works perfectly the entire time it stays in the water. Once the butterfly-type weight reaches the bottom, the lure floats instantly and turns its tail up. Any movements of water or minor movements of the lure make it move. Thus, **Joco Shaker Super Floating** lure can be animated for a long time practically in a single spot. In cold water, when predatory fish are passive, it is the only way of provoking the fish to attack.
2. The number of missed strikes decreases significantly. The floating lure always stays in a vertical position in water – it is an optimal position for a successful strike of biting predatory fish.
3. In muddy water, it is more difficult for predatory fish to notice your lure at a great distance. And if it lies on the bottom, noticing it is practically impossible. The floating lure is always clearly visible and attractive even at a great distance.

Joco Shaker Super Floating lure is supplied in the following sizes: 2.5 inches – for angling perch; 3.5 inches – for angling perch and pike-perch, and 4.5 inches – for angling pike. The lure has a special "pocket" for off-set hooks. It has to be installed on a swivel system with a single or double hook. The palette of 10 colours has been specifically selected.

3D BASARA SOFT SWIM

2,5"/ 3,5"/ 5,0"/ 6,0"

"New to the Lucky John lineup this year is the new generation of realistic baitfish plastics that sets the new standard in soft baits – the Basara 3D Soft Swim. This revolutionary plastic combines the most realistic of appearances, a specially designed 3D/holographic imaging that projects out to distance to attract gamefish, with lifelike shad tail action and the patented Lucky John scent retention and dispersal system. Available in 4 attention getting color schemes and 4 different sizes, the Basara 3D Soft Swim is as versatile as it is lethal to jumbo perch, slab crappies, aggressive bass, and trophy walleyed pike. The Basara 3D is the product of the finest Japanese production technology, made of high quality PVC soft plastic material with an unbelievably lifelike finish more often seen on high end hardbaits. The most effective plastic available in swimbait and jigging presentations, the Basara 3D Live plastic series is the obvious choice for today's serious angler.

PACKAGE OF SHADS

TIOGA FAT 3,9"/4,5"/5,8"

Tioga FAT – a lure designed for angling trophy predators. Due to the original form of its body, this lure, while moving in the water, generates swings, which attract predators. Its side ribs serve to enhance the lure's play, making its movements more real. This hybrid lure has a worm-like body with typical thickening in the front part and small hoof-tail from shad. It is equipped with a special pocket for off-set hook installation. Thanks to its "fleshy" body, this lure can be used without front split shots in plant-filled water bodies. The lure has an attractive mackerel scent. The Scent&Taste Inside Formula guarantees that, after the bite, fish would hold the lure in its mouth for the maximum period of time, allowing you to perform an efficient strike.

TIOGA 2"/2,4"/2,9"/3,4"

Tioga is a lure designed specially for perch and pike-perch fishing. The unique shape of the body provides movements in the water generating swings attracting a predator. The side ribs strengthen the play of the lure, providing it with «live» movements. The hybrid lure has a worm-shaped body with the typical thickening at the front and small claw-tail of the shad. The lure has the attractive smell of mackerel. **Tioga 2"** is the best lures for micro jig, it can be installed both on a jig-head and on an offset hook. Bigger lures **Tioga 3.4"** are perfect for classic jig, and **Tioga 2,9"** can be successfully applied to many kinds of different rigs with a lead. The smallest lures attract the attention of perch and ratan goby and other micro jig fish. Bigger models will get interest of pike and pike-perch. Scent&Taste Inside Formula ensures that after the biting the fish will keep a bait in the mouth as long as it is possible. It will always allow performing of timely and successful hooking.

PACKAGE OF SHADS LONG JOHN 3,1"/4,2"

Long John is the model of one of the most popular shads in the world. The stretched shape of a body provides it with the unique effect of "wriggling" lure. This shad is justly known as a real pike-perch „killer". The **Long John – new edition** lure is applied both to fishing with classic jig and with other spinning rods tackles. It is completed not only with renewed shape of the well-known lure, but also with a new formula of an attractant with mackerel flavour integrated into the lure material composition. The modern colour-grade can turn every event of fishing to be fascinating and profitable. Perfectly chosen sizes of the body and the tail always provide steady operation of the lure with loads of different weights. The lures Long John – new edition 7.9 cm comes in fourteen different colours.

PACKAGE OF SHADS MINNOW 2,2"/3,3"/4,4"/5,5"

LJ MINNOW is the most popular model of a shad with a classic shape. The shape of the lure's body resembling a little fish along with a tail fin generate incredible swings when moving in water. The material used in **LJ MINNOW** soft lures deserves particular attention. The base of the lure is soft plastic, which perfectly retains the shape of the lure and is resistant to external impacts. It has certain immunity to predator's teeth, withstands a lot of bites and is firmly attached to the hook. The lure has an explicit taste and scent of mackerel due to the aromatic salt introduced in the structure of the material and a special aromatic oil used as the coating of the lure. It would be no exaggeration to state that the combination of soft plastic resistant to predator's teeth, a strong attractant and a wide range of colours makes this lure universal for any type of angling for the most popular predatory fish, such as pike, pike-perch and perch, using jig tackle.

PACKAGE OF S-SHAD TAIL 2,8"/3,8"

S-SHAD TAIL is a shad with an elongated ribbed body. Due to the original shape of the lure, its body has a different cross-section in its front and rear parts; such geometry of the lure's body ensures its special play, attracting any predator. **S-SHAD TAIL** is made according to advanced technology. It is a lure from the so-called class of scented. The lure has explicit taste and scent of mackerel due to the aromatic salt introduced in the structure of the material and a special aromatic oil used as the coating of the lure. The lure is made of very soft silicon, which, along with aromatic and flavour properties, confuses the predator; it keeps holding the lure in its mouth, allowing you to make a confident strike. After fishing, it is recommended to put the lure back into its packaging, since it contains aromatic oil and the so-called "re-charge" of the lure takes place. **S-SHAD TAIL** is a great solution for angling from early spring to late autumn.

PACKAGE OF SHADS MR. GREEDY 3"/3,9"/5,0"

Mister Greedy is a soft lure made from salty soft plastic. The lure has a body shape, fleshy enough, designed for pike-perch or pike fishing. The lure perfectly matches with classic jig or different installations with an offset hook at shallow waters. The **Mister Greedy** lure can be efficiently applied to pike fishing in weedy places without additional load. Scent&Taste Inside Formula ensures that after biting a pike and a pike-perch will keep bait in the mouth as long as it is possible.

PACKAGE OF HAMA STICK 3,5"

In terms of geometry, the stick-bait has long stretched body without any evident outdents and active elements, which actually makes it a passive lure. **Hama Stick** is in demand for drop shot angling, as well as in heavily overgrown water bodies. The lure is mounted on an offset hook without a split shot, the tip of the hook is hidden in a special indent thoughtfully designed by LJ experts. Thus, the lure smoothly goes through heavy tangled water vegetation. Due to the use of soft and flexible plastic, **Hama Stick** realistically plays in the water, provoking the predatory fish to attack. The predator that attacked the lure fearlessly swallows it; if the striking was not successful, having tasted the mackerel lure the predator makes repeated attack attempts until it catches the lure, thus multiplying the chances of the angler. **Hama Stick** lure has great casting range, which will appeal any angler! Apart from that, the lure is designed in attracting size and colour grade – perfectly imitates forage base of zander, perch and pike.

PACKAGE OF TWISTERS BALLIST 3,3"/4"

Ballist is a hybrid of a worm and a twister with a steady shrimp attractant. The lure has a stretched worm-shaped ribby body and a small soft twister tail. It can imitate both a leech or a big nymph and an oblong baby fish. It is manufactured in 10 colours including „acid“ and realistic colours. The **Ballist** lure perfectly matches to rigs with a lead – wire lead, Caroline or split shot. There are possibilities to perform animation of different types including slow and steady and similar to twitching with small jerks. The **Ballist** lures are very efficient in micro jig with slow reeling or with bait dragging over the bottom.

PACKAGE OF TWISTERS

ROCK CRAW 2,0"

Rock Craw is a lure imitating a crayfish. This lure is active as distinct from other passive lures of this type. The **Rock Craw** lure is very universal: it can be used on the head of jig during the fishing with slow retrieving. It efficiently provokes a predator fishing on split shot or Carolina rig. The movable legs and tails of the lure create swings attracting predatory fish during casting. Soft "scented" material treated with a crayfish attractant will catch fancy of fish looking for haul mostly with its sense of smell, as for example a catfish does. This lure also will not leave big perches unfazed, because, as it is known, they are great eaters of crayfish meat.

HOGY SHRIMP 2,2"/3"

NEW

Hogy Shrimp is a lure imitating a fantasy underwater crayfish with many legs, which is really popular to hunt for among large perches and other predatory fish. **Hogy Shrimp** is a passive lure that is perfect for all kinds of mounting: a retractable leader, a Carolina tackle, etc.; as well as does not kink the fishing line. The composition of lure's material includes an attractant with the smell and taste of crayfish; therefore, the lure will preserve its taste properties for a long time. Hogy Shrimp lure is close to its natural food object in terms of the size and has "working" colour grade, which allows achieving biting even with passive fish. **Hogy Shrimp** is perfect for angling fish not only in fresh water, but also in the sea. During the tests, this lure helped catching dozens of scorpion-fish, sea pigfish and croakers!

PACKAGE OF SHADS BABY ROCKFISH 1,4"/2,4"

The Baby Rockfish- one of our most popular soft plastic baits for ice fishing. This small paddle tail minnow imitation is infused with a strong mackerel scent that freshwater fish cannot ignore, utilizing the trademark Lucky John "Edible Bait" technology that features both wide scent dispersion and scent retention in the body of the plastic. The Baby Rockfish is designed to be small enough to be used with tungsten micro jigs for slab crappies and jumbo perch, but also punches well above its weight class while bringing in bigger predators such as trout and walleye.

FROG 2,0"/2,6"

Soft rubber surface lure – FROG. It is designed for angling in the rough-est conditions, in heavily plant-filled water bodies, where the use of other lures proves unviable. The main intended target species – pike. The main method of guiding – light jerking of the lure with short intervals of 1–1,5 seconds. The strike should not be performed hastily in order to avoid low efficiency of bites. Thus, the following scheme is recommended. When you see that a pike has practically snatched the frog, don't pull the lure from under its nose or out of its mouth. On the contrary, you should ease the cord, wait for 1,5–2 seconds and only then make an accented strike.

LUCKY JOHN PRO SERIES WOBBLERS

Magnetic Cast System (MCS) – a system consisting of a magnet and fixed and static balls, which allows casting a lure for the longest distance possible without kinking and dead on target. This system ensures qualitative balancing and easy handling of a wobbler at any type of reeling. MCS system is the first patent in the production of PRO Series wobblers.

How does MCS system work? During the casting, the ball is detached from the magnet by the centrifugal force and rolls to the tail end of the lure, thus shifting the centre of gravity. After touching the water, when the reeling starts, the ball rolls to the head end of the wobbler, where it is fixed by the magnet. To ensure roll stability, there are five balls located in special compartments of the lure: three in the head end, and two – in the tail end. During the reeling, these balls have low degree of motion, thus allowing aggressive reeling with the lure.

Outside Stabilizer System (OSS) – a system of external stabilization of a lure with the help of a tungsten ball. The lower part of lure's head features a special capsule with a tungsten ball next to the dropping blade. As continuous tests of such design have shown, the weighted

upper part of crank-baits is what creates distinctive vibration. OSS is not only additional vibration of the lure during the reeling, but also additional increase of flying range. At the moment, OSS system is the most effective stabilizing system of crank-bait class lures.

Original colours

Shades: 101, 103, 107, 108, 109 and 110 – original design of the “bloody” series. Lucky John Series. Shades 302 and 303 deserve special attention as they have the ability of glowing in ultra-violet rays (UV) and the shade 205 in turn has “fish” bones that glow.

Original camouflage army shades are also interesting: 503, 504, 505 and 506. As the tests have shown, these shades do not scare away the predatory fish, when it is particularly cautious. These shades are more effective than any others, either in muddy water or during sunny weather. The following shades have been developed specifically for the ANIRA lure: 111, 113, 304 and 305.

Complete set

Wobblers are equipped with high-quality Japanese hooks and factory guides.

LUCKY JOHN PRO SERIES MAKORA WOBBLERS

Makora is the classic series of jerk-baits designed in two sizes of 110 mm and 130 mm particularly popular for angling predatory fish. The wobblers of these series are distinguished by their unique play they demonstrate during both jerking and even guiding. By deviating from the line of guiding and moving in wide tacks, these wobblers attract pike. Its body combined with the weight specially designed by Lucky John specialists makes the wobbler move from side to side and turning a little around its aisle when jerking, thus perfectly affecting predatory fish during the pause. The system of long casting **Magnetic Cast System** helps in casting the lure at long distances and with high precision. The wobblers of these series come in two versions – floating and neutral floating ability, which ensures a wide scope of application. Three triple hooks reduce the possibility of hook pulls to the extent possible.

LUCKY JOHN PRO SERIES BASARA WOBBLERS

A series of jerk-bait wobblers class that are manufactured in the following sizes: 35, 40, 56, 70 and 90 mm. Two buoyancy modifications are represented in each size group, except for 35: floating and suspender. 35 mm size is available only in floating version with an enlarged dropping blade (LBF). Due to MCS system, all of the **BASARA** Series wobblers have excellent flying properties and allow highly aggressive animation of the lure. The main angling target: any predatory fish.

BASARA PLUS ONE 90F, 90SP

A new addition to the best selling Basara line this year is the Basara 90 Floating and Suspending crankbaits. This longer version of the Basara model offers a bigger package in response to angler requests for a bigger, deeper diving model. The Plus One features a reconfigured and elongated lip that now allows this big and bad Basara to dive down to depths of 3 meters, making it a great choice while trolling for walleyes. Offered in 14 dynamic and realistic finishes, all Basaras feature both the finest in Japanese hooks, as well as the patented Lucky John Magnetic Cast System, ensuring the most realistic baitfish movement to gather the attention of predator gamefish worldwide.

WOBBLERS LUCKY JOHN PRO SERIES KUBIRA

KUBIRA PLUS ONE 110F is a deep-water lure, designed for angling large predatory fish at a depth of up to 3.8 metres. The size of the lure is 110 mm and its weight is 16 grams. It is supplied in a floating design. These wobblers are distinguished by their unique play they demonstrate during both jerking and even guiding. This wobbler can be used for trolling as well. The dynamic play of the lure attracts pike, pike-perch and large perch. The system specifically designed and patented by **Lucky John** specialists **Magnetic Cast System (MCS)**, using a magnet, moving and fixed balls, allows casting the lure to the maximum distance possible. The **MCS** system makes the wobbler to move easily from side to side and make light swings around its axis when jerking, thus perfectly affecting predatory fish. The lure is equipped with two powerful triple hooks, which allow reducing the possibility of hook pulls to the extent possible.

LUCKY JOHN PRO SERIES ANIRA WOBBLERS

If you need a lure for angling predatory fish in shallow water, **ANIRA** series of wobblers will be the best choice. Wobblers have stable intense small-frequency playing. They are perfect for any type of reeling: steady or jerking (twitching). The lures are manufactured in 39, 49 and 69 mm sizes and only in the suspender version. The smallest size – 39mm, has an enlarged dropping blade (**LBSP**). The lure shows the best results in shallow still water bodies or water bodies with slow current. During the pauses, the lure remains in one place, thus provoking the predatory fish to attack. Due to **MCS** system, all of the **ANIRA** Series wobblers have excellent flying properties and allow highly aggressive animation of the lure. The main angling target: perch and pike.

LUCKY JOHN PRO SERIES ANTIRA WOBBLERS

Lucky John presents a novelty in 2016 – a series of unique composite wobblers-minnow with an original design, the **ANTIRA SWIM 115**. The small tail serves as an additional lure for predators when the wobbler moves. The special trait of wobblers from this series is their unique play, which they demonstrate both during jerking and even guiding. **ANTIRA SWIM 115** is simply irreplaceable when you need to guide the lure practically on the surface while uncovering at the same time all the unique possibilities of its play. This wobbler is designed for point fishing in certain water areas. It lures in even passive predators. Wobblers of this series come in two versions – floating and of neutral floating ability, which ensures a wide scope of application.

LUCKY JOHN PRO SERIES HAIRA SHALLOW PILOT WOBBLERS

This small wobbler with thick body and the size of 33 and 44 mm is a lure of crank-bait class and comes only in the floating version with a small lip. Maximum depth of the lure at fast reeling is just 20 cm. Once stopped, the wobbler quickly surfaces, thus allowing effective animation, while successfully avoiding underwater obstacles: water vegetation and snags. At steady reeling, the wobbler moves with intense playing: vibrating with high frequency with all its body at minimum amplitude. The wobbler creates a noticeable wave behind it, which attracts any predatory fish. Due to **OSS** system, all of the **Haira Tiny Shallow Pilot** wobblers have additional vibration of the lure during the reeling and increased flying range. The main angling target: chub, trout, asp, perch and gar.

LUCKY JOHN PRO SERIES HAIRA PLUS ONE WOBBLERS

Modification of the floating version of Haira Tiny wobbler manufactured with a long lip (**LBF**). This lure of crank-bait class is able to dive up to 1 metre, which is why it was given such name. The best animation of the lure would be to interchange small accelerations and stops during the reeling. Most of the biting occurs at the moment of stop – stay focused! **OSS** stabilization system perfectly orients the lure in the water regardless of whether there is current in this place or not. Due to **OSS** system, all of the **Haira Tiny Plus One** wobblers have additional vibration of the lure during the reeling and increased flying range. The main angling target: chub, trout, asp, perch and gar.

LUCKY JOHN PRO SERIES LUI PENCIL WOBBLERS

The wobbler **LUI PENCIL 98** is a classic "walker", which can be used for angling in shallow and densely overgrown places of rivers, lakes and water reservoirs, where the use of other lures is irrational. These lures are mainly distinguished by their behaviour on water – due to the shape of its body and the balance specifically designed by Lucky John specialists. **LUI PENCIL 98** easily glides on the surface, smoothly moving from side to side and drawing an imaginary snake on the surface of water. Such behaviour of the lure attracts even passive predatory fish hiding in the water. By using the system of fixed balls inside the walker, Lucky John company has managed to achieve perfect flying properties of the lure. Powerful qualitative triple hooks manufactured in Japan allow for reducing the possibility of hook pulls to the furthest extent possible.

LUCKY JOHN PRO SERIES VIKARA WOBBLERS

VIKARA 62S is a lure with an eyelet for fastening the fishing line to its back, distinguished by the absence of a lip and a high profile of the body. Sinking wobbler. Its length is 62 mm and weight is 13 grams, and it allows angling at the depth of up to 5 metres. The wobbler has high-frequency swings of the body during guiding and a loud noise system, which attracts the fish in muddy water. The body of the lure features a chamber with metal balls, which create rhythmic sounds by hitting the walls of the chamber during movement, which the fish is unable to resist. A lip-less design allows angling the fish, using different methods of animation from steady to gradual, thus enhancing the possibilities of the lure. The lure is equipped with high-quality hooks made in Japan.

SPINNERS

LUCKY JOHN BONNIE BLADE

Bonnie Blade is a series of Lucky John spinners. These lures combine modern design solutions that ensure reliable and stable playing of spinners and, most importantly, make them very attractive for any predatory fish.

A spinning blade is the main element of the spinners. It is light-weight, is made of brass and has good dynamic properties when spinning in the water, thus it allows performing reeling of the lure at minimum speed. The blade is wound up as soon as the spinner starts to move. The blades are painted from both sides. No matter from which side the fish is looking, blade's colour will remain the same and attractive, which increases the interest of the fish in the lure and, as a result, ends up in an effective attack.

Another important element is a mandrel, which influences the weight and casting range of the lure, as well as its stability in the water. Two types of mandrels are used in Bonnie Blade spinners: with balls and cylindrical. Thanks to the main ball, the centre of gravity of the spinner is shifted to its tail end, thus increasing

the casting range of its smaller models. A cylindrical mandrel of larger models is made of brass with crosswise grooves, which, undoubtedly, increase lure's attractiveness, as well as stabilize its horizontal position when moving in the water.

Metal ball-bearings and a reflective cone are intended for easy spinning of the blade around its axis and prevent its "sticking". Rigid fixing wire of the blade, which is made of steel unriveted wire drilled from the sides, ensures complete freedom of spinning of the blade with minimum friction with the axis of the lure.

All the trebles have a bright fly, the main function of which is to take away all the doubts from the predatory fish ready to attack. Moreover, the fly plays the role of a stabilizer of horizontal stability. The base of the spinner is stainless carbon wire. Its axis will not deform in extreme situations, and the lure will always be in operable condition. Six sizes and eight shades allow finding the right lure almost for any conditions of spin angling of perch, pike, trout or salmon.

LUCKY JOHN SHELT BLADE

Shelt Blade is the series of spinners from Lucky John. These lures use modern design solutions, which ensure reliable and stable action. It is lightweight, made of brass, and has good dynamic properties when rotating in water, thus allowing the guiding of the lure at minimum speed. The blade kicks into gear as soon

as the lure starts moving. The blades are painted from both sides. Regardless of the angle, at which predatory fish looks at the lure, its colour remains equally attractive. All triple hooks feature a bright fly, the main purpose of which is to take away any doubts from predatory fish which is ready to attack.

SPINNERS
LUCKY JOHN
TRIAN BLADE ROUND

Trian Blade Round is the series of spinners from Lucky John with a classic oval shape of the blade. These lures use modern design solutions, which ensure the reliable and stable animation of spinner and make them highly attractive for any predatory fish. The rotating blade is made of brass and has steady movement at different methods and speed of guiding. When rotating, the angle of deviation of the blade is 60 degrees. The

blades are painted from both sides, thus causing high interest of the fish. The body of the lures is made of heavy alloy, ensuring additional casting distance when casting the spinner, and has an adjusted geometric shape of the core, which allows reducing the twisting of the line during the play of the lure to the extent possible. All triple hooks feature a bright fly, which serves as an additional exciter for the fish.

LUCKY JOHN SPOON-BAITS FOR TROUT ANGLING

The number of fee-based water bodies, where the angling of pond rainbow trout is allowed, grows each year. It is not a secret that the Area Fishing – trout angling in artificial water bodies – is a rapidly developing issue. It is, probably, one of the most accessible variants of fishing, with a spinning rod, for metropolitan citizens and people, the flying pace of life of which allows devoting just a mere couple of hours a week to the beloved hobby. Being able to "hold" 1-kg or bigger trout on the lightweight spinning rod, many anglers forever become the fans of this type of fishing. Keeping up with the time, a new series of micro spoon-baits has been introduced in the assortment of Lucky John lures for angling pond and wild trout: AYU and IMA. The main component of any successful angling is the availability of appropriate tackle: UL-class spinning rod (with the test of up to 5 g); thin braided wire, or even better – monofilament fishing line with the diameter of up to 0.18 mm; and lightweight minimum-size spinning reel. AYU and IMA trout spinners are equipped with qualitative Japanese sports hooks. Do not be confused that this a "single piece" with no groove on it, as it turns out it is completely unnecessary. In Japan, just as in many other countries, they have been long prohibited. The number of escapes does not depend on its presence! All jerks of the fish are successfully damped by the spinning rod; it is preferable for the rod to be of medium-action type and the fishing line, as it has already been mentioned, to be monofilament, particularly for the minimum-size lures. If the fish is played with such balanced tackle, the trout will not open its mouth due to excessive effort of the angler, and the hook will not fall from its mouth, even if the fishing line is completely released. If the fish is played using aggressive and rigid fast action type spinning rod with braided fishing line, somersaults and zooms of the resisting fish are unavoidable. As a result, unbending of the hook takes place and, naturally, the fish escapes. Try angling with a UL spinning rod and Lucky John trout lures. You are going to like it! After all, these spinners are just as good for angling perch, red-eye, grayling, sabre-fish, asp, orfe, chub and other predatory fish, and even peaceful fish. But that is a completely different story... Good luck!

LUCKY JOHN SPINNER BAITS

Spinnerbaits are artificial lures that do not resemble any living prototypes, either fish or other aquatic creature. Nevertheless, these lures are effective for catching pike and large perch. On certain days, spinner baits can even deliver the best results for pike! This fantasy lure consists of a spinning blade, and a loaded single hook with elastic synthetic skirt mounted on a wire frame.

HIGH-QUALITY HOOKS – LUCKY JOHN

A series of high-quality hooks from LUCKY JOHN for angling of predatory fish is designed for sportsmen and “advanced” anglers. And there is nothing surprising about it – LUCKY JOHN hooks are made only in Japan, in the best specialized factories of the country. In their production, only the highest-quality materials and modern technologies are used. All these factors serve as a guarantee of the highest consistent quality of the hooks. Special technologies, designing, production and testing of the new series of LUCKY JOHN hooks allowed the manufacturer to satisfy all requirements of professional sportsmen regarding the main part of tackle:

- strict technological quality control on every production stage
- special carbon-alloyed steel
- modern heat treatment technologies
- high strength
- finest sharpening of hook point
- durable anti-corrosive coating

TREBLE HOOKS PREDATOR LJH234
